

BANC3 Awarded Professional Database Services Contract

August 2008

To execute a major upgrade of computer technologies managed by the State of New Jersey Judiciary Administrative Office of the Courts (AOC), the NJ Department of the Treasury has selected BANC3 to provide professional data processing system services.

The National Center for State Courts (NCSC) recently conducted a study in New Jersey with a twofold objective: To determine the Information Technology requirements of the state's courts, and to prepare a master plan to delineate the development and implementation of the computer systems necessary to satisfy those requirements. Once installed, the selected upgrades—including Web, network and database technologies—will enable the state Judiciary to meet the current demands of the daily operations of its courts.

Among its systems currently in use, the AOC Data Center maintains operations on two IBM Z-series mainframes which support approximately 2,500 MTX network computers, 9,500 personal computers, 5,000 printers, and 530 communications controllers. The AOC Systems Network architecture consists of 75 analog leased lines supporting over 550 locations. Over 10,000 users are currently utilizing AOC Local Area Networks located throughout the State. New systems will permit more rapid and efficient case processing through automated capabilities such as docketing, indexing, and completion of court forms. They will also assist in court management by providing effective monitoring of case status and court workloads. BANC3 has been selected to provide

services in the following areas: legacy applications, client-server applications, applied technologies systems, systems programming, network design and office systems.

The mission of NCSC is to improve the administration of justice through leadership and service to state courts. Through original research, consulting services, and national educational programs, NCSC offers solutions that enhance court operations with the latest technology; collects and interprets the latest data on court operations nationwide; and provides information on proven best practices" for improving court operations. NCSC is an independent, nonprofit organization in accordance with Section 501(c)(3).

As a multidisciplinary Engineering and IT consultant, BANC3 combines a range of services found in large engineering firms with the select focus of a small specialty consulting firm. With over 70 project managers, task leaders, professional engineers, surveyors and IT professionals who are experts in their respective fields, we are able to insert singular design, planning and construction support immediately into a project. By providing a unique collection of services all under one roof, we save our clients the effort and expense of using disparate contractors. From our corporate headquarters in Cranbury, NJ, BANC3 implements our custom in-house services on projects across the country.
